

Flight school planning software that keeps you ahead.

Gain unmatched visibility across your operation. Track student progress, forecast aircraft and instructor demand, plan intakes — and align your whole team months, even years, in advance.

THE CHALLENGE

Keeping training on track is harder than it looks.

You've got great instructors, reliable aircraft, and a solid syllabus — so why is on-time training still so hard to deliver? Because planning isn't just about today. It's knowing where each student is, what they've got left, and whether the resources will be there when they need them. And things change — students fall behind, groups shift, priorities move. Without a clear view of the whole picture, reforecasting by spreadsheet is near impossible, and you're left firefighting.

WHAT YOU GET

- **Forecast resource demand**
See the aircraft and instructors your plan will require, and where future capacity shortfalls will occur.
- **Test different scenarios**
Change fleet, instructors, starts or assumptions and see the impact before making the decision.
- **Reforecast as things change**
Adjust training plans as progress changes rather than rebuilding spreadsheets every time something moves.
- **Plan new intakes**
Build an intake plan that makes the best use of your aircraft and instructors.
- **Know who needs attention**
See who is progressing well, who is starting to drift, and where action is needed.
- **See the knock-on effect**
See how delays and changes affect the wider plan, and make adjustments early to keep training on track.

HOW AEROPLANNED WORKS — THE THREE LEVELS OF PLANNING

STRATEGIC

Set the direction

Training demand and planned capacity, balanced for best possible results.

TACTICAL

Make it achievable

Training plans, recruitment, enrollments and aircraft in place, adjusted as the real world hits.

OPERATIONAL

Deliver it, in priority

Every student, instructor, aircraft and simulator ready to go.

"With Aeroplanned, we've improved resource utilization by smoothing out predicted peaks and troughs in training."

Myles Wilson

Fleet and Training Planning Officer, Skyborne Aviation

TRUSTED BY LEADING FLIGHT TRAINING ORGANIZATIONS

See it in your operation.

Book a walkthrough tailored to your training setup — a real Aeroplanned environment, not a slideshow.
